

Why Platform Matters When Choosing an ERP System

Constant change and disruption means that ERP systems should be built on platforms that can help your **business adapt** and **stay relevant**.

Learn about **FIVE FACTORS** that every business should weigh as they consider how Kenandy and the Salesforce App Cloud will carry them to the next level of growth.

"Kenandy is like Legos whereas the traditional ERP systems are more like a stack of lumber and blueprints."

— Pete Staples, President and Co-Founder, Blue Clover Devices

1. Business Agility

As a business, you can't be slowed by excessive coding as your business processes change. ERP built on the right platform enables drag-and-drop configuration, so you can map your business processes to the system and make changes on demand.

-Salesforce Customer Relationship Survey, Confrimit Inc. 2014

52%
Faster Configuration

2. Extensibility

47%
Faster Integration

Salesforce AppExchange: 3000 apps / Over 2 million developers

You need the ability to easily extend your apps for additional functionality. ERP on the Salesforce App Cloud can be quickly extended with the robust apps on the Salesforce AppExchange. The Salesforce App Cloud also supports rapid integration with third-party apps. Full support for major authentication and authorization protocols, as well as robust APIs, means less integration time and faster productivity.

-Salesforce Customer Relationship Survey, Confrimit Inc. 2014

3. Fast Deployment

Achieve faster ROI by implementing quickly and getting users up and running right away. An agile deployment process helps businesses deploy Kenandy Cloud ERP within weeks.

-Salesforce Customer Relationship Survey, Confrimit Inc. 2014

55%
Faster Deployment

4 UP to Billion Transactions Per day

4. Speed

With an average transaction time of 200 ms

Leveraging the elastic computing power of the cloud means unprecedented scale and speed is at your fingertips. MRP, a process that once took hours to complete and would monopolize the whole system, can be completed in real-time.
